LABELEXPO AMERICAS 2024 LABEL WASTE SUSTAINABILITY INITIATIVE

With the help of the TLMI (Tag and Label Manufacturers Institute), Convergen Energy is partnering once again with Labelexpo Americas and Rosemont Exposition Services to divert any label byproduct materials from being sent to landfill. Convergen Energy is located in Green Bay, WI, and can convert the below materials into feedstocks to replace fossil fuels for power plants, industrial facilities, and other energy-intensive institutions. For us to process as much label byproduct through Convergen, it is imperative that we have your support during the event.

The following materials would be accepted for collection:

- Pressure Sensitive Label Stock
- Flexible Packaging
- Shrink or Wrap Around Material
- Metalized PET
- Release Liners
- Matrix Waste etc.

The following materials are not accepted for collection:

- Chlorine, PVC, Vinyl, or any other chlorinated material
- Garbage or post-consumer waste
- Metal

HOW DO I SIGN UP?

1. Email Claire Comery at claire.comery@informa.com to confirm your participation in our waste removal program.
2. Send one of your booth representatives to the nearest RES Service Center onsite to schedule a waste service to be collected by Convergen each time this is required. RES Service Centers are located in Hall A and in Hall F.

Exhibitors who schedule their waste removal through RES to have it collected by Convergen throughout the show will not pay for the collection. This will be offered free of charge by RES.

For any questions, please contact Labelexpo America's Operations Director, Claire Comery at claire.comery@informa.com
